

bite away®

CONQUER BUG BITES

3 out of 5 consumers

say that insect bites prevent them from enjoying their time outdoors². Summer is nearly here, and outdoor recreation is at an all time high, but it's also the season for insects. **bite away®** relieves the itch and pain from bites or stings, so you can get back to doing what you love.

INTRODUCING BITE AWAY

One click is all it takes for relief.

bite away is an FDA cleared electronic medical device used for the external treatment of bites and stings from mosquitoes, wasps, bees, gnats, horseflies and other insects.

Our patented¹ safety technology distributes concentrated heat through a ceramic contact tip, to instantly stop the symptomatic itching, swelling, and pain associated with insect bites and stings.

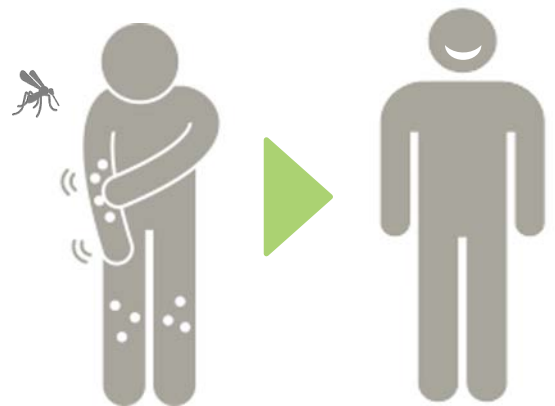

Using it is simple—place on your bite, press the 3 or 5-sec button to turn on, and breathe a sigh of relief!

EXPERTS ON YOUR SKIN

While **bite away** is new to the US, we come from a strong German heritage. Our parent company, MibeTec Germany, is a member of the Dermapharm Group that was founded in 1991. They bring over 30 years of medical technology research and development.

In short, we know a thing or two about what causes the itch from a bite or sting, and how to stop it...*fast*.

TREAT WITH HEAT

Bite Away really works

- Clinically Proven & FDA-Approved
- Dermatologist Tested
- Chemical Free & Hypo-Allergenic
- Patented 3-Tier Safety Technology

Chemical-Free Treatment

Works solely through concentrated heat

Sustainable

Batteries included with up to 300 uses per battery life

Fast & Simple

Choose the 3 or 5-second setting for instant relief
